

MATT BLACK HOBS WITH AUTOVENT 2.0: NEW TRENDS IN THE KITCHEN

The iconic **Classica aesthetic** that characterizes Smeg built-in appliances with the elegant combination of glass and steel is enriched with a new finish in line with the latest trends in contemporary living: **matt black**. A shade in perfect contemporary style that makes the appliance the real star of the kitchen.

Matt black induction hobs with Autovent 2.0 combine advanced technologies with a distinctive design: The cooktop's fully screen-printed surface not only gives it an elegant satin finish but also makes it scratch-resistant. **Double ceramization** of the glass, along with screen printing, ensures a highly durable finish because it creates a coating that hardens the glass, decreasing the likelihood of the appearance of scratches and abrasions. After use, simply wipe the surface with a wet kitchen sponge to remove any residue. In addition, the **backlit white controls** add a touch of sophistication to the product.

The **Classica Matt Black** range of hobs with Autovent 2.0 meets every need with **induction hobs** in different sizes: 60 and 80 cm with 4 cooking zones and 80 cm and 90 cm, equipped with 6 cooking zones.

Advanced technologies characterize the range, the result of careful design.

The innovative **Auto-Vent 2.0 function** allows the cooktop to be automatically connected via Bluetooth to the hood equipped with the same function. The hood will automatically adjust its power to match the settings on the hob, effectively drawing in all cooking vapors. Alternatively, the two appliances can also be connected manually for constant and timely control, ensuring an optimal cooking experience.

The **Evoslider display** allows you to adjust the power of each zone with a simple touch on the touch device. Each cooking area features **9 power levels** plus a **Dual Booster**, which adds an extra level of maximum power for better energy management.

Linea induction cooktops, in fact, never compromise on **energy efficiency**. Thanks to the Eco-logic Advance function, it is possible to limit the absorption of the hob from 11.1 kW down to 1.4 kW, respecting the maximum consumption allowed by the home.

Advanced features make the hob versatile and a high-performance appliance. **Permanent auto-pot detection system** automatically detects the presence of the pot resting on the hob and activates

the corresponding control on the display, you will then only need to set the desired power to complete cooking.

The cooking experience is also enriched by the **Grill function**, which, through the use of the **GRILLPLATE**, the knurled grill, and **TPKPLATE**, the smooth grill, accessories, allows you to grill meat, fish and vegetables to perfection on a perfectly nonstick surface. The accessories are ideal for use on both gas and induction cooktops thanks to the removable inserts at the bottom.

SMEG

Founded in 1948, SMEG, whose name stands for "Smalterie Metallurgiche Emiliane Guastalla," is a proudly Italian company now in its third generation of the Bertazzoni family.
